AutoCAD was designed by Michael Matthews (a former engineer with AutoCAD), Dave Luxton, and David Lidsky. It was first released on 28 December 1982 for MS-DOS, and version 1.0 was released in March 1983. The first commercial version of AutoCAD was released on 29 October 1983. AutoCAD was originally produced by the now-defunct Autodesk, Inc. It was sold as a standalone, usually single-user application and by 1984 the desktop versions of AutoCAD were known as AutoCAD R1, AutoCAD R2, AutoCAD R3 and AutoCAD R4. Later versions of AutoCAD include AutoCAD 2010, AutoCAD 2011, AutoCAD LT, AutoCAD LT 3D, and AutoCAD LT for Mac. AutoCAD LT stands for "Light Table". AutoCAD 2009 and later versions are available as a cloud service. Contents show] Licensing and use The pricing of AutoCAD is based on the number of licensees, not on the number of units sold. For the initial version of AutoCAD, Autodesk sold a single copy of AutoCAD to an individual user for US\$2,400. In the late 1980s and early 1990s, the price of AutoCAD rose significantly. One copy of AutoCAD now costs US\$23,000. The US\$23,000 price of the latest version of AutoCAD is required for a single user license (unless an additional number of users are present on the same computer). This will become the baseline license price for the next version. If a company (i.e., a business) employs only one user, the company can acquire one license for US\$12,000. This allows the company to use AutoCAD software for a large number of tasks, including creating drawings. Cloud license Autodesk offers an annual subscription license for AutoCAD as a cloud service. It provides access to the product through either the website or mobile device application. It is also possible to upgrade and downgrade as needed, without having to purchase additional licenses. The cloud license is charged on a usage-based system where each hour the cloud service is used is billed. The additional features and other benefits are billed based on the type of subscription that is used. The subscription costs can be evaluated based on the number of persons using the cloud service, the

AutoLISP for AutoCAD AutoLISP for AutoCAD or simply AutoLISP for AutoCAD is an interpreter and programming language that makes it possible to use all AutoLISP functions on the graphical part of AutoCAD. All functions in AutoLISP can be used directly on the screen. The AutoLISP interpreter can be accessed from the AutoCAD graphic user interface with a context menu or from the palette (in Tools Palette, the Autolisp Function Button) AutoLISP allows developers and programmers to write their own functions, menus and dialog boxes. It is a fairly powerful environment for writing a user interface. With AutoLISP's graphical environment, code can be written and edited directly on the screen with no need to create an AutoLISP file. The code can be saved automatically as an AutoLISP file, which can then be sent to Autodesk Exchange and run. With AutoLISP, programmers have been able to create new menus, dialog boxes and other functions that don't fit into the AutoCAD standard. The Autodesk Exchange Apps (e.g., Autodesk Vault) include a number of AutoCAD users' contributions. AutoLISP applications are in the process of standardization in the Autodesk Exchange Apps.
